

Romex GR Series: - Plasticut Scrap Grinder

1. Incorporated with a tangential feed system which pulls the article / runners from the hopper into the cutting chamber.
2. Specially designed casting frame for low noise and rigid construction of grinder structure.
3. Special Angular contact bearing is mounted outside the cutting chamber, thus having no overhang load, thereby resulting in accurate alignment of cutting blade.
4. The cutting blades are arranged in unique shear angle, facilitating the cutting of rigid and soft material with equal efficiency.
5. The hopper opens upwards at the line of rotor exposing the entire cutting chamber for easy cleaning and changing of blades.
6. The screen swings downward for easy removal of left over material and quick cleaning.
7. Rugged and all welded steel body.
